Apollo Solar to Provide Full Technical Training at Three National Distributor Events

The Apollo T80 Charge Controller Featured at SunWize, AEE Solar, and Conergy Dealer Trainings

Bethel, CT--(BUSINESS WIRE)—February 15, 2007—Apollo Solar, a company that specializes in the design and manufacturer of innovative power conditioning and control electronics for solar applications has announced three product trainings. The trainings directed to solar electric dealers and installers will be held by SunWize Technologies in early March in Cocoa Beach Florida, by AEE Solar at the end of March in Salt Lake City, Utah, and by ConergyUS at the beginning of April in Albuquerque, NM.

The trainings will feature the Apollo T80 Charge Controller which provides power and control in a single device by integrating Maximum Power Point Tracking, battery charge management, state of charge information and communications into a single device. With 80 Amps continuous output at ambient temperatures of up to 40°C/104°F, the T80 has the largest power capacity in the industry by over 30%. Special emphasis in the trainings will be on the unit's ease of installation, the fail-safe battery-charging defaults, and the use of the exclusive built-in energy monitor.

The trainings will allow dealers and installers to become more familiar with the features and benefits of the full Apollo Solar product line. The product architecture is based on a thoroughly robust thermal design that makes the Apollo battery management system more reliable especially in extreme temperatures and more efficient at harvesting power from any make or model of photovoltaic modules. The trainings will also show how with the easy-to-install Apollo networking card up to 16 T80 units can be daisy-chained together to produce up to 1280 Amps into the battery bank, thus providing the same high level of power and control for larger systems.

About Apollo Solar

Apollo Solar is an engineering and sales organization committed to bringing innovative technology to the renewable energy market. The company has over 40 years of engineering expertise in providing industrial strength solutions and unique power management systems for NASA, the United States Government, the US military, as well as numerous Fortune 500 clients. Apollo Solar is now bringing the same high reliability and efficient power management to the residential and commercial solar-energy markets through distributors across North America as well as in Spain, Australia and India.
